

Essential Productivity Tools and Features

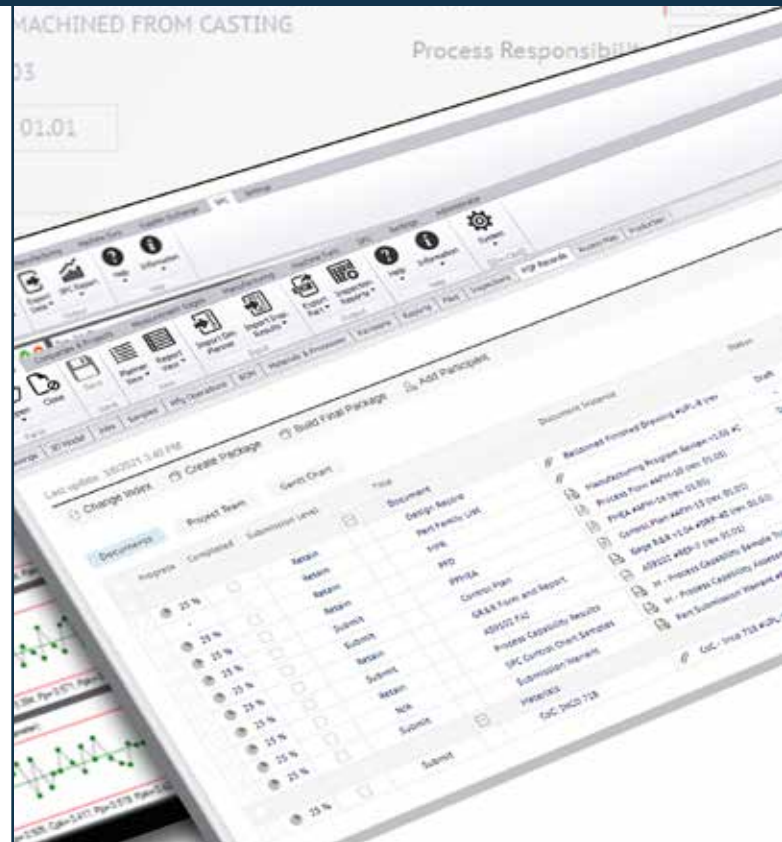

The most powerful capabilities you need to be productive, all in one complete software.

- Centralized database for documentation and forms
- Adaptable project management templates
- Comprehensive automated forms
- Secure user access control
- Standards-driven production processes
- Supplier performance evaluation
- Electronic signature QBDQ
- Powerful revision control and management
- OHEOHQDQ DQGEQH
- High QA 360 Exchange Server for remote and in-network collaboration
- Streamlined practices for compliance with manufacturing quality standards
- Customizable library of templates for each buyer and OEM

Streamlined Process with PPAP Templates and Forms

High QA PQP supports the 18 elements of the Production Part Approval Process (PPAP) with forms and templates that streamline and simplify creation and submission of documents and reports including:

- ▶ Quality management process documentation
 - ▶ First Article Inspection (FAI)
 - ▶ Non-conformance Report (NCR)
 - ▶ Acceptance Quality Limit (AQL) based sample planning
- ▶ Process Flow Diagram (PFD)
- ▶ Process Failure Mode and Effects Analysis (PFMEA)
- ▶ Gage Repeatability & Reproducibility (Gage R&R)
- ▶ Process Control Plan (PCP)
- ▶ Statistical Process Control (SPC)
- ▶ Part Submission Warrant (PSW)

Inspection Manager™

Inspection Manager, the ultimate manufacturing quality management software, automates and optimizes your manufacturing quality process in one comprehensive software. It brings improved flexibility, efficiency, and productivity to your quality process.

High QA PQP is a fully integrated application with Inspection Manager. Together, they provide a highly advanced level of manufacturing quality project management that makes you more efficient, productive and successful.

Automate labor intensive processes

Eliminate data and human interpretation errors

Automate labor intensive manual processes

Intuitively develop quality documentation

Reduce quality control bottlenecks

Expedite delivery time and improve part quality

Inspection Manager brings you comprehensive integrated tools and workflows to ensure quality throughout manufacturing. The features are carefully designed to guide you through the quality process from ballooning and planning to data collection and reporting.

BALLOON	PLAN	COLLECT	REPORT
One-click auto-ballooning and GD&T data extraction	Plan, implement and manage quality process	Automated inspection data collection	Easily submit document package to your customers

High QA

High QA is a leading provider of integrated manufacturing quality management software solutions (MQMS) for any size company in all major manufacturing industries. Inspection Manager™, built on the High QA 360™ platform, optimizes and automates the entire quality process creating a seamless partnership and collaboration with supply chains. It provides quality insights above and beyond pass/fail, eliminates human interpretation errors and reduces quality control bottlenecks. This ensures products meet specifications, are delivered on time and comply with applicable standards. With extensive industry experience, High QA keeps its customers and partners at the forefront of Quality 4.0 and manufacturing technology.
